

Case Study

A well-established Mexican restaurant required a practical solution to utilise their outdoor space to provide a controlled environment ensuring a pleasant dining experience for customers all year round.

The result was a stunning installation of eight motorised Zipscreens completely enclosing the balcony, creating a wind and sun break to deliver the ultimate outdoor dining experience.

The Solution

The owner first saw Zipscreens installed at the local hotel and was immediately impressed by the transformation of their outdoor dining area. It was clear that Zipscreens were the ideal product to provide the protection from the elements that the exposed balcony desperately needed, without disrupting the view. Outdoor NV were contacted to manage the project from start to finish, which included on-site preparations and measurements of each individual opening to ensure the installation of each custom size Zipscreen was hassle-free.

Zipscreens feature an innovative, patented side fastening technology to create a seamless join between the aluminium side channels and the fabric screen, resulting in an extremely secure and fully enclosed shading solution. The modern square

design of the extruded aluminium cassette blended into the building's aesthetic perfectly, in addition to ensuring longevity of the fabric.

Each Zipscreen was motorised to allow for maximum shade management, as well as providing the staff with effortless and convenient control of each shade. As an added bonus, the Zipscreens also provided the ideal opportunity to increase brand awareness by printing the company logo on the fabric of the shades installed in the most prominent areas of the building.
